https://dharmabahadurbudhathoki.netlify.app/

Adaptable and results-driven **Full Stack Developer** with strong hands-on expertise in **Vue.js 3, Node.js, TypeScript, Vue Router, Express.js, and PostgreSQL**, complemented by practical experience in **Laravel, Inertia.js, React.js, PHP, and MySQL**. Skilled in designing and developing scalable full-stack applications across both JavaScript and PHP ecosystems.
Experienced in building clean, well-structured **RESTful APIs**, integrating frontend frameworks with backend services, and delivering maintainable solutions using **Laravel + Inertia.js**. Proficient in modern cloud practices with hands-on experience across key AWS services such as **Lambda, API Gateway, S3, and RDS**, as well as implementing CI/CD pipelines and serverless architectures.
A fast learner and highly motivated engineer, committed to writing clean, maintainable, and efficient code. Flexible across multiple tech stacks, confident in quickly adopting new tools, and ready to contribute effectively from day one in a dynamic engineering environment.

EXPERIENCE

Information Care, Kathmandu On-site

Full-Stack Developer Nov, 2024 - Jan, 2025

- Developed and maintained full-stack features using React.js, Node.js, TypeScript, and Tailwind CSS for an internal operations management platform
- Built reusable and scalable UI components, integrated frontend with RESTful APIs connected via TypeORM and PostgreSQL
- Contributed to monolithic and microservices architectures, helping transition legacy codebases into modular systems
- Implemented complex business logic and data models using TypeORM, improving maintainability and readability
- Diagnosed and resolved backend issues, optimizing query performance and reducing API response time by 30%
- Integrated Docker for containerization, and deployed microservices using AWS EC2, RDS, and S3
- Configured GitHub Actions for CI/CD pipelines, enabling seamless deployment and real-time feature delivery
- Applied Agile methodologies (Scrum) to collaborate effectively with cross-functional teams, deliver sprints, and manage tasks through Jira
- Conducted code reviews, refactoring legacy code to align with modern standards and best practices in performance, security, and readability

Uplifter Nepal, Kathmandu On-site

Junior Full-Stack Developer Mar, 2023 - Oct, 2024

- Developed and maintained full-stack web applications using Laravel (PHP) for backend logic and Vue.js for interactive frontend interfaces
- Designed and optimized MySQL databases for performance and scalability, writing complex queries and stored procedures
- Integrated eSewa and Khalti payment gateways, enabling seamless online transactions and invoicing for customers
- Automated build and deployment pipelines using GitLab CI/CD, significantly reducing manual release time and human error
- Deployed applications on AWS EC2, configured server environments, and set up Nginx, SSL certificates, and domain routing
- Created reusable frontend components and improved performance through lazy loading and efficient state management
- Actively participated in Agile/Scrum practices including sprint planning, retrospectives, and daily stand-ups in a distributed team
- Monitored system performance, implemented logging and error handling, and contributed to post-mortem reviews to enhance reliability
- Collaborated in a version-controlled (Git) workflow using GitLab with branching strategies and merge requests

EDUCATION

Master's student in Information Technology (Software Engineering) Sydney

Charles Darwin University (CDU) Australia Jul, 2025 - Present

• Coursework: Advanced Web Development, Cloud Computing, Software Architecture
• Developed real-world applications as part of group-based Agile projects

Bachelor of Science Honours (BSc.Hons) in Computing Kathmandu

Islington College Feb, 2022 - Dec, 2024

• Final Year Project: Mero Gym Management System
  – Earned 3 A grades for outstanding project execution, complexity, and presentation
  – Designed and developed a monolithic Laravel + Vue.js application for gym operations and eCommerce
  – Used Scrum methodology for iterative development and sprint planning
  – Deployed the application on AWS EC2 with RDS, ensuring production-level performance
  – Built automated CI/CD pipelines using GitLab Actions
  – Wrote unit, feature, and integration tests to ensure high code quality
  – Delivered complete project documentation including SRS, ERD, UML diagrams, and user manuals
• Relevant Coursework:
  Software Engineering, Database Systems, Advanced Web Programming, Software Project Management

PROJECTS

Shopflicker (Laravel, vue js , mysql)

Tech Stack: Laravel, Vue.js, MySQL, AWS EC2/RDS, GitLab CI/CD, Online Payments

- Built a mobile-responsive jewelry e-commerce platform with OTP login and multi-gateway payments (eSewa & Khalti).
- Developed a monolithic Laravel + Vue.js SPA optimized for scalability and maintainability.
- Applied TDD for authentication, payment flows, and core business logic with unit and feature tests.
- Designed MySQL schemas with indexing and query optimization for high performance.
- Implemented features like product filtering, wishlist, promo codes, secure checkout, and SEO-friendly routing.
- Deployed on AWS EC2 & RDS with automated CI/CD via GitLab.
- Followed Agile workflows and added a basic analytics dashboard for sales and order tracking.

Nepalilaikaam – Job Posting Platform (Legacy Stack Enhancement)

Tech Stack: Laravel (Livewire, Blade), jQuery, MySQL, REST API, TDD

- Modernised and optimised a legacy job posting system by improving backend logic, database performance, and frontend interactions
- Built RESTful APIs for mobile integration and ensured backend compatibility for future mobile application development
- Refactored codebase and database queries to significantly improve performance and maintainability
- Resolved legacy bugs, implemented new modules following best practices, and followed Test-Driven Development for reliability
- Collaborated closely with stakeholders to improve system usability without full-stack migration
- Deployed updates using GitLab CI/CD and maintained code documentation for long-term scalability

Task Management System

Tech Stack: Next.js, TypeScript, Redux Toolkit, Node.js, Prisma ORM, PostgreSQL, AWS EC2 & Amplify, GitHub Actions, Jest

- Built a task management platform with authentication, RBAC, real-time updates, and drag-and-drop Kanban boards.
- Developed reusable components and scalable state management with Redux Toolkit + TypeScript.
- Designed relational models with Prisma ORM and optimized PostgreSQL queries.
- Created backend APIs in Node.js using clean architecture principles.
- Implemented real-time collaboration via WebSockets.
- Deployed frontend on AWS Amplify and backend on AWS EC2 with Nginx and PM2.
- Automated CI/CD with GitHub Actions, including linting, testing, and deployments.
- Applied TDD with Jest and Supertest, plus security measures like JWT, rate-limiting, and validation.
- Optimized performance with lazy loading, pagination, and query tuning.
- Followed Agile workflows and maintained documentation with strict code quality tools.

Real-Time Chat Application

Tech Stack: Next.js, TypeScript, Tailwind CSS, Redis (Upstash), Pusher, Google OAuth, SSR, AWS EC2, GitHub Actions

- Built a real-time chat platform with Pusher WebSockets, typing indicators, and read receipts.
- Integrated Google OAuth 2.0 with JWT sessions and refresh tokens.
- Designed responsive, reusable UI with TypeScript + Tailwind CSS.
- Implemented SSR in Next.js for SEO and fast first-load performance.
- Used Upstash Redis for chat streams and presence tracking.
- Deployed on AWS EC2 with Nginx, PM2, and CI/CD via GitHub Actions.
- Applied strong security measures and clean architecture principles.

- Wrote tests for UI components and WebSocket flows; worked in Agile sprints with code reviews.

Mero Futsal Website

Tech Stack: Laravel, Vue.js, Inertia.js, MySQL, WebSockets, Google OAuth, AWS EC2, Nginx, GitLab CI/CD, TDD

- Built a real-time futsal booking platform with venue details, live slot availability, and instant booking synchronization via WebSockets.
- Developed a seamless SPA experience using Laravel, Vue.js, and Inertia.js with secure Google OAuth authentication.
- Designed optimized MySQL schemas for venues, bookings, and schedules, enabling advanced availability and notification logic.
- Implemented TDD for core features and delivered real-time notifications for bookings, cancellations, and reminders.
- Deployed on AWS EC2 with Nginx reverse proxy, SSL, and CI/CD automation through GitLab.
- Improved performance with query caching, eager loading, and route-level middleware; followed Agile workflows with Jira and GitLab Issues.

Food Attitude – Cakes & Pastries E-commerce Platform

Tech Stack: Laravel, Vue.js, MySQL, AWS EC2, GitLab CI/CD

- Enhanced an e-commerce platform offering product browsing, customization options, and delivery scheduling for cakes and pastries
- Optimized complex MySQL queries to improve database performance and reduce page load times during high traffic
- Refined and fixed backend business logic to ensure accurate pricing, order processing, and inventory management
- Developed and extended admin dashboard features, including order tracking, user management, and sales analytics to improve operational efficiency
- Collaborated in deploying updates and patches on AWS EC2, using GitLab CI/CD pipelines for smooth, automated rollouts
- Applied best practices in code refactoring, improving maintainability and reducing technical debt
- Worked closely with cross-functional teams following Agile methodologies for timely feature delivery and bug fixes

CRM (Ticket Management System)

Tech Stack: Laravel, Vue.js, MySQL, REST API, GitLab CI/CD, TDD, Agile

- Enhanced an existing online cake and pastry store with custom product features, delivery scheduling, and admin dashboard improvements
- Optimized backend SQL queries for faster product search and filtering, reducing response times across high-traffic endpoints
- Refactored legacy logic in both backend and frontend, significantly improving maintainability and performance
- Added robust features in the admin dashboard including graphical analytics, notifications, and access control
- Followed Agile methodologies using iterative development, planning, and code review sessions
- mplemented Test-Driven Development (TDD) to ensure code reliability, with unit and feature tests validating key functionalities
- Set up GitLab CI/CD pipelines to automate testing, deployment, and rollback strategies for faster, safer production releases
- Coordinated with internal team members to streamline development, enabling collaborative improvements in real-time

Mero Gym

Tech Stack: Laravel, Vue.js, Inertia.js, MySQL, Google OAuth, OTP Login, Notifications, AWS EC2 & RDS, Nginx, GitLab CI/CD, Scrum, TDD

- Built a SaaS gym management system with memberships, trainer management, and e-commerce.
- Developed a subscription module with activation, renewal, and expiry reminders.
- Integrated secure payments for memberships and product sales with invoicing.
- Implemented real-time reminders for expiries, schedules, and dues via notifications and push alerts.
- Linked product catalog and inventory to gym services.
- Delivered a SPA-like UX with Vue.js + Inertia.js and secure authentication via Google OAuth, OTP, and email verification.
- Deployed on AWS EC2 & RDS with Nginx and automated CI/CD via GitLab.
- Applied Agile Scrum and TDD for scalability and maintainability.

TwitterClone (Practice Project)

Tech Stack: React.js, Node.js, Express.js, MySQL, TypeScript, Prisma

- Replicated key Twitter features like tweeting, commenting, liking, and Google login
- Used MySQL + Prisma to create optimized relational data models
- Implemented real-time notifications and error handling
- Clean project structure based on MVC pattern

Open to part-time front-end, back-end, or full-stack developer roles. Professional references available upon request.

SKILLS

Core Professional Skills: Leadership, Communication, Problem-Solving, Collaboration, Agile Workflows, Backend (Primary – JavaScript Stack): Node.js · Express.js · TypeORM · RESTful APIs, Backend (Adaptable): Laravel (built multiple projects, showing flexibility across stacks), Frontend: React.js · Vue.js · TypeScript · TanStack Query · Tailwind CSS, atabases: MySQL · PostgreSQL · MongoDB, Cloud: AWS (EC2 · Amplify · RDS), ools & DevOps: Git · GitHub · Docker · CI/CD · Agile/Scrum, esting / Quality: Jest · Mocha · Cypress · PHPUnit
